

Hanwell RL4101

Product Images

Short Description

The RL4101 has a precision thermistor sensor and high quality humidity sensor. These sensors are housed in convenient plug mounted housings.

Description

The RL4101 is part of the 4000 range of advanced radio transmitters. They allow wire-free monitoring of a site, with real time alarm notification and historical analysis of data. Each RL4101 unit reads its on-board sensors providing accurate and reliable information about environmental conditions. This data is transmitted, at user-defined intervals, to the Radiolog system where it is filed for analysis.

The RL4101 has a precision thermistor sensor and high quality humidity sensor. These sensors are housed in convenient plug mounted housings.

There are two sensor mounting options; either plug mounted or remote cable mounted. The on-board plug in sensors are used to measure over the instrument operating range. To measure over the whole range remote sensors are required.
