Short Description

The Pulse Input Adapters are used to log the number of switch closures per interval and are designed to work with the HOBO Weather Stations.

Description

This product has been discontinued.

The Pulse Input Adapters are used to log the number of switch closures per interval and are designed to work with the HOBO Weather Stations.

Two versions are available for easy interfacing with either mechanical contact closures or solid-state electronic switches. the contact closure version is ideal for connecting to tipping-bucket rain gauges.

The adaptors have a plug-in modular connector that enables them to be easily added to Weather Stations.
