Short Description

The ml4701 allows wire-free monitoring of a site, with real time alarm notification and historical analysis of data.

Description

It is recognised that one of the major causes of damage to works of art, fine furniture, carpets, wall coverings and museum exhibits is light falling on the objects. Hanwell provide a range of instruments that enable the conservator to measure the levels of Lux and the UV content of light.

The ML4701 allows wire-free monitoring of a site, with real time alarm notification and historical analysis of data.

These instruments provide the conservator with the necessary information to protect their valuable exhibits. Using proven Hanwell technology, measurements can be taken of the amount of visible light (Lux) falling on objects. Areas that would have previously required expensive and disruptive wiring can now be monitored by radio sensors.

Additional Information

Promotion	Tempcon no longer represent IMC Hanwell in the UK, however we do calibrate these products. Please contact us to discuss your requirements. View our extensive range of wireless data logging solutions.
Brand	Hanwell
Typical applications	Environmental (Indoor), Non Specific
Measurements	Light Intensity
