Short Description

The RL4106 radio transmitter is one of a new range of advanced temperature and humidity radio transmitters. They allow wire-free monitoring of a site, with real time alarm notification and historical analysis of data.

Description

The RL4106 radio transmitter is one of a new range of advanced radio transmitters. They allow wire-free monitoring of a site, with real time alarm notification and historical analysis of data. Each RL4106 unit reads its on-board sensors to provide accurate and reliable information about environmental conditions. This data is transmitted, at user-defined intervals, to the Radiolog system where it is filed for analysis.

The RL4106 has two sensors as standard: a precision temperature probe and a high quality humidity probe. These sensors can be mounted internally to the transmitter body, externally on the case or remotely on a probe. An additional surface temperature probe can be added to check the dewpoint margins. These sensors can be calibrated by the users or at Hanwell's in-house calibration laboratory.

Additional Information

Promotion	Tempcon no longer represent IMC Hanwell in the UK, however we do calibrate these products. Please contact us to discuss your requirements. View our extensive range of wireless data logging solutions.
Brand	Hanwell
Channel(s)	1
Typical applications	Environmental (Indoor), Thermal Comfort
Measurements	Humidity, Temperature
