Short Description

The iSense Energy range uses tried and tested Hanwell radio technology to monitor your energy usage remotely through point-to-point radio (PTP). With the added benefit that the current clamps can be added without disconnecting existing wiring.

Description

The iSense Energy range uses tried and tested Hanwell radio technology to monitor your energy usage remotely through point-to-point radio (PTP). With the added benefit that the current clamps can be added without disconnecting existing wiring. iSense Energy will assist in diagnosing and eliminating areas of wasted energy and accurately report on costs and trends directly from the data it collects.

The software allows up-to eight different tariffs to be created allowing an accurate costing of energy use over periods of time and for particular pieces of equipment and/or areas of concern.

This fast and reliable data transfer will allow automatic archiving of data onto a server. This can be done in two ways; though a LAN enabled retrieving base station or a receiving point with a direct USB PC connection.

Additional Information

Promotion	Tempcon no longer represent IMC Hanwell in the UK, however we do calibrate these products. Please contact us to discuss your requirements. View our extensive range of wireless data logging solutions.
Brand	Hanwell
Typical applications	Building Monitoring, Energy, Environmental (Indoor)
Measurements	Current AC, Voltage AC, Voltage DC
