Description

This Product has been discontinued so there is limited availability. Please see Related Products for a suitable alternative.

The U11 lets you simultaneously monitor and log state changes in up to three locations plus one time/date stamped event for use in energy audits and equipment monitoring.

- The 3 state and 1 event channels monitor contact closures, or openings, on motors, doors, and other cycling equipment which provide a contact output. The loggers large memory records up to 43K time/date stamped state changes/events.
- The State logger can be used with the CSV-A8 Current Switch to monitor equipment on/off by sensing current flow in a conductor.
- The loggers have a direct USB interface.
- Easy-to-use HOBOWare (Windows) software provides statistical data such as total % time closed, total % time open, and total number of events.
