Description

This dual channel thermocouple data logger is the extended memory version of the YL-T16 and is capable of recording 4 million readings with the following thermocouple types: K, T, J, B, E, N, R and S.

Featuring two thermocouple inputs, the YL-T16 is ideal for measuring surface temperature, air temperature or product temperature.

The data logger has an integrated reference junction for temperature and delivers proper readings within a large temperature range. The resolution in the range of -100 to +1300°C is 0.05 K with an accuracy of ± 0.3K.

To get the overall accuracy simply add the figures for the thermocouple.
